

Digital Sovereignty Maturity Assessment

Executive Summary

Organization: [Customer Name]
Assessment Date: [Date]
Prepared By: [Facilitator Name], Red Hat
Version: 1.0

Assessment Overview

This assessment evaluated [Customer Organization] 's Digital Sovereignty maturity across 7 key domains (5 main domains plus 2 sub-pillars) using an industry-standard 5-level maturity framework. The assessment was conducted through interactive workshops with representatives from IT leadership, security, operations, and compliance functions.

Assessment Structure: The 7 domains include Data Sovereignty, Technical Sovereignty (including Open Source sub-pillar), Operational Sovereignty (including Managed Services sub-pillar), Assurance Sovereignty, and Executive Oversight.

Maturity Assessment Results

Domain	Score	Maturity Level	Key Finding
Data Sovereignty	[XX%]	[Level]	[Brief finding - e.g., "Strong residency policies but gaps in key management"]
Technical Sovereignty	[XX%]	[Level]	[Brief finding]
Operational Sovereignty	[XX%]	[Level]	[Brief finding]
Assurance Sovereignty	[XX%]	[Level]	[Brief finding]
Open Source	[XX%]	[Level]	[Brief finding]
Executive Oversight	[XX%]	[Level]	[Brief finding]
Managed Services	[XX%]	[Level]	[Brief finding]

Key Strengths

- [Strength 1 Domain/Capability] : [Description - e.g., "Well-documented operational procedures with quarterly reviews and clear ownership"]
- [Strength 2 Domain/Capability] : [Description]
- [Strength 3 Domain/Capability] : [Description]

Critical Gaps

- [Gap 1 Domain/Capability] : [Description - e.g., "No external key management - cloud provider controls encryption keys"]
- [Gap 2 Domain/Capability] : [Description]
- [Gap 3 Domain/Capability] : [Description]

Priority Recommendations

Immediate Actions (0-3 months)

Action	Domain	Priority	Impact
[Action 1 - e.g., "Implement HSM-based external key management"]	Data Sovereignty	HIGH	[Expected impact]
[Action 2]	[Domain]	HIGH	[Expected impact]
[Action 3]	[Domain]	MEDIUM	[Expected impact]

Tactical Improvements (3-12 months)

- [Initiative 1 with brief description]
- [Initiative 2 with brief description]
- [Initiative 3 with brief description]

Strategic Initiatives (12-36 months)

- [Long-term goal 1 with brief description]
- [Long-term goal 2 with brief description]
- [Long-term goal 3 with brief description]

Executive Recommendations

Key Message: [Overall recommendation paragraph - e.g., "While the organization demonstrates strong executive awareness and operational foundations, critical gaps in cryptographic key management and vendor contract terms pose significant sovereignty risks. Immediate action is recommended to implement external key management and renegotiate cloud contracts with sovereignty clauses."]

Investment Priority: Focus initial investments on:

- [Priority area 1 with budget/resource implication]
- [Priority area 2 with budget/resource implication]
- [Priority area 3 with budget/resource implication]

Industry Context

This assessment used [Industry/LOB] weighting, which emphasizes [domains] based on regulatory requirements and industry best practices relevant to [specific regulations - e.g., "financial services (DORA, PCI DSS)"] .

Regulatory Drivers:

- [Regulation 1 with deadline/requirement]
- [Regulation 2 with deadline/requirement]
- [Regulation 3 with deadline/requirement]

Next Steps

1. **Validate Findings:** Review detailed assessment results with technical teams to confirm accuracy
2. **Roadmap Workshop:** Conduct 2-hour planning session to develop detailed implementation roadmap
3. **Budget Planning:** Develop resource requirements and budget estimates for priority initiatives
4. **Stakeholder Alignment:** Brief Board/C-suite on findings and secure sponsorship for sovereignty program
5. **Initiate Quick Wins:** Begin immediate actions that can be completed within 3 months
6. **Quarterly Reviews:** Schedule progress check-ins every 90 days
7. **Annual Reassessment:** Plan full reassessment in 12 months to measure improvement

How Red Hat Can Help

Red Hat offers comprehensive support for your sovereignty journey, including:

- **Architecture & Design:** Sovereign cloud architecture reviews and reference implementations
- **Technology Solutions:** Red Hat OpenShift, Advanced Cluster Security, Trusted Software Supply Chain

- **Professional Services:** Implementation support for key management, containerization, and migration
- **Training & Skills Development:** Workshops and certifications for internal teams
- **Managed Services:** Sovereign-compliant managed cloud services with domestic operations
- **Ongoing Advisory:** Quarterly maturity reviews and continuous improvement support

Recommended Engagement:

[Specific Red Hat offering/service recommendation based on gaps identified - e.g., "Given the critical gaps in key management and container security, we recommend a 2-week Architecture Workshop focused on implementing External Key Management with Red Hat Advanced Cluster Security for sovereign Kubernetes environments."]
