

Digital Sovereignty Maturity Assessment Workshop

A comprehensive one-day workshop to evaluate and enhance your organization's digital sovereignty posture

Workshop Details

Duration: 1 full day (6-7 hours including breaks)

Location: [Customer Site / Virtual]

Date: [To be scheduled]

Format: Interactive workshop with assessment, discussion, and collaborative analysis

Participants

Customer Representatives

- Chief Information Officer (CIO)
- Chief Operating Officer (COO) or delegate
- Chief Information Security Officer (CISO)

Red Hat Team

- Digital Sovereignty Architect
- Account Team Representatives
- Technical Consultants (as needed)
- Solutions Architect

- Chief Architect / Technical Lead
- Compliance / Legal Officer (optional)
- Cloud Infrastructure Lead (optional)

Workshop Objectives

- Understand the strategic importance of Digital Sovereignty in your context
- Complete a comprehensive maturity assessment across 7 sovereignty domains
- Identify current strengths and critical capability gaps
- Develop a prioritized roadmap for sovereignty enhancement
- Align on short-term quick wins and long-term strategic initiatives

Detailed Agenda

09:00 - 09:30 (30 min)

Welcome & Workshop Objectives

- Introductions and participant roles
- Workshop goals and expected outcomes
- Overview of the day's agenda
- Ground rules and expectations

09:30 - 10:30 (60 min)**Digital Sovereignty: The Context**

- **What is Digital Sovereignty?** Definition and strategic importance
- **Regulatory Landscape:**
 - EU Cloud Sovereignty Framework
 - Regional requirements (GDPR, NIS2, DORA, etc.)
 - Industry-specific mandates (FSI, Healthcare, Government)
- **Customer Context Discussion:** Your specific sovereignty concerns and drivers
- **Red Hat's Approach:** How we enable sovereign cloud strategies
- Q&A and open discussion

10:30 - 10:45 (15 min)**BREAK**

10:45 - 11:15 (30 min)

The 5-Level Maturity Model Framework

- **5-Level Maturity Model:** Introduction to industry-standard 5 levels (Initial → Managed → Defined → Quantitatively Managed → Optimizing)
- **The 7 Digital Sovereignty Domains:**
 - Data Sovereignty
 - Technical Sovereignty (including Open Source sub-pillar)
 - Operational Sovereignty (including Managed Services sub-pillar)
 - Assurance Sovereignty
 - Executive Oversight

Note: Open Source and Managed Services are assessed as integrated sub-pillars within Technical and Operational Sovereignty respectively.

- **Understanding the Inflection Point:** Moving from reactive (Levels 1-2) to proactive (Levels 3-5)
- **Assessment Methodology:** How scoring works, evidence-based evaluation, industry weighting

11:15 - 12:30 (75 min)

Domain Deep-Dive & Assessment: Part 1

Interactive assessment of the first 3 domains:

1. Data Sovereignty

- Data residency and location control
- Data protection and privacy compliance
- Data classification and inventory
- Legal and jurisdictional control
- Cryptographic key management
- Workload data protection (data-in-use)
- Data flow and transfer auditing
- Third-party data access policies

2. Technical Sovereignty

- Technology stack ownership and control
- Vendor lock-in risk mitigation
- Standardized framework adoption
- Interoperability and portability strategy
- Hardware and infrastructure source verification
- Self-hosted application runtime control
- Code and intellectual property control
- Future-proofing technology roadmaps

3. Operational Sovereignty

- Operational process documentation
- Dependency on external managed services
- Access control and identity management
- Internal skills and competency development
- Disaster recovery and business continuity
- Supply chain transparency and vetting
- Sovereign incident response plan
- Operational autonomy in critical functions

For each domain, we will:

- Review the 8 capability questions
- Discuss what "good" looks like at each maturity level
- Evaluate current state with evidence
- Identify relevant examples from your environment
- Capture improvement opportunities

12:30 - 13:30 (60 min) **LUNCH**

13:30 - 15:00 (90 min)

Domain Deep-Dive & Assessment: Part 2

Continue interactive assessment for remaining 4 domains:

4. Assurance Sovereignty

- Audit and inspection rights
- Sovereign security monitoring (SIEM)
- Compliance framework verification
- Vendor transparency requirements
- Sovereign certifications and attestations
- Continuous security validation
- Independent security testing
- Vulnerability and patch management

5. Open Source

- Open source strategy and policy
- Community participation and influence
- License compliance management
- Open source vulnerability scanning
- Sovereign open source distributions
- Contribution policies and guidelines
- Internal open source expertise
- Open source project governance

6. Executive Oversight

- Board and C-suite awareness
- Dedicated sovereignty governance
- Budget allocation for sovereignty
- Sovereign cloud policies
- Risk management integration
- Accountability and ownership
- Strategic sovereignty planning
- Regulatory relationship management

7. Managed Services

- Vendor selection criteria (sovereignty focus)
- Contractual sovereignty controls
- Geographic and jurisdictional restrictions
- Data access limitations
- Performance and compliance monitoring
- Transition and exit planning
- Alternative provider evaluation
- Insourcing capability development

15:00 - 15:15 (15 min)

BREAK

15:15 - 16:15 (60 min)

Results Review & Analysis

- **Overall Maturity Score:** Present aggregate results and rating
- **Domain-by-Domain Breakdown:**
 - Spider chart visualization
 - Areas of strength to build upon
 - Critical capability gaps requiring attention
 - Industry comparison (based on selected LOB weighting)
- **Gap Prioritization:**
 - Quick wins (0-3 months)
 - Tactical improvements (3-12 months)
 - Strategic initiatives (12+ months)
- **Maturity Progression Path:** What does the journey from current state to target state look like?
- **Discussion:** Constraints, dependencies, and success factors

16:15 - 16:30 (15 min)**Next Steps & Wrap-up**

- Summary of key findings and insights
- Immediate action items (who, what, when)
- Schedule follow-up Value-Based Action Plan session
- Feedback on workshop format and content
- Thank you and closing remarks

Follow-up: Value-Based Action Plan

To be scheduled within 2 weeks of initial workshop

Follow-up Session Details

Duration: 90 minutes

Format: Virtual meeting

Participants: Same as workshop + additional stakeholders as needed

Session Agenda

Heatmap Review & Suggested Actions

- Review of priority actions from workshop
- Customer feedback on initial workshop findings
- Refined heatmap presentation showing:
 - Current state vs. target state
 - Effort vs. impact analysis
 - Dependencies and sequencing
- **Actionable Roadmap:**
 - Short-term initiatives (Quick wins, 0-3 months)
 - Medium-term improvements (Tactical changes, 3-12 months)
 - Long-term goals (Strategic transformation, 12-36 months)
- **Red Hat Value Proposition:** How we can support your sovereignty journey
- **Next Steps:** Project planning, resource allocation, partnership opportunities

Pre-Workshop Preparation

To maximize the value of the workshop, please prepare the following information:

- Current cloud infrastructure provider(s) and services in use
- List of critical business applications and their hosting locations
- Existing compliance frameworks and certifications (ISO 27001, SOC 2, etc.)
- Data classification policies and data residency requirements
- Key vendor relationships and managed service agreements
- Recent security audits, risk assessments, or compliance reviews
- Disaster recovery and business continuity documentation
- Open source usage policies and practices (if applicable)
- Any known sovereignty concerns or regulatory requirements

Expected Outcomes

- **Baseline Assessment:** Comprehensive understanding of current sovereignty maturity across all 7 domains
- **Gap Analysis:** Clear identification of strengths and areas for improvement
- **Prioritized Roadmap:** Actionable plan with sequenced initiatives
- **Stakeholder Alignment:** Shared understanding among technical and business leaders
- **Foundation for Action:** Evidence-based justification for sovereignty investments
